Tax season can be a stressful time for many Americans, and scammers are waiting for you to slip up so they can steal your personal information, money and identity. The National Cybersecurity Alliance and the Internal Revenue Service (IRS) want to help you stay safe online while filing your taxes with these best practices, tips, and resources.

**LOCK DOWN YOUR LOGIN**
Create long and unique passphrases for all accounts and use multi-factor authentication (MFA) wherever possible. MFA will fortify your online accounts by creating an extra layer of security, such as a unique one-time code sent to your phone. Most major email and online tax preparation services have this tool available.

**INSTALL A PASSWORD MANAGER**
Remembering unique passwords for accounts is difficult. Store your login credentials in a password manager. Password managers will automatically populate your username and password upon login, and even recommend strong new passwords for each account.

**DONT WAIT TO UPDATE**
Before filing your taxes at home or work, be sure that all internet-connected devices – including PCs, smartphones and tablets – are running the most current versions of software to improve the performance and security of your devices.

**YOU SHOULD KNOW: IDENTITY PROTECTION PIN (IP PIN)**
An Identity Protection PIN (IP PIN) is a six-digit number that prevents someone else from filing a tax return using your Social Security number. The IP PIN is known only to you and the IRS and helps verify your identity when you file your electronic or paper tax return.

**BEFORE YOU GET STARTED: PREPARE YOUR DEVICES**

WATCH OUT FOR SCAMS

Unsolicited emails, calls, or texts that prompt you to click on a link or share valuable personal and financial information are very likely scams. With your personal data, online thieves can swindle funds and/or commit identity theft. Learn how to recognize a scam with the following tips:

IRS COMMUNICATIONS: REAL VS. FAKE

Be skeptical of any phone calls, emails, or texts claiming to be from the IRS, or other government agencies. Almost all contact from the IRS will be initiated via the U.S. Postal Service. They will only call once they have established a line of communication with you via physical mail first. The IRS will not demand you make an immediate payment to a source other than the U.S. Treasury.

Unscrupulous callers claiming to be federal employees can be very convincing by using fake names or phony ID numbers. If you are unsure if the caller is legitimate, hang up, look up the direct number for the agency online, and call that source to verify.

OTHER RED FLAGS

- Requests for PII
  - Personally Identifiable Information (PII) refers to any data that could potentially identify a specific individual.
  - For example: Bank account information, Social Security numbers, login credentials, mailing addresses

- Urgency
  - The sender uses an abnormal sense of urgency, or other scare tactics, to obtain information.

- Attachments
  - The message includes an attachment, such as a PDF. Never open attachments from a suspicious or unknown email address. It may download malware or viruses onto your device.

REPORT IT.

You can report IRS, Treasury or tax-related phishing scams to phishing@irs.gov. Report phishing helps prevent future phishing attempts and protect others. Once you report a phish, delete it.
WORKING WITH TAX PREPARERS

DO YOUR RESEARCH
Vet your tax preparer before handing over sensitive information and ask what steps they take to protect your information. Businesses of all sizes are susceptible to cyberthieves, so it is critical to choose a preparer who takes security seriously.

CHOOSING A CYBER-SAVVY TAX PREPARER
Be selective about who you choose to file your taxes. Consider asking them the following questions:

- How will we exchange files and sensitive information?
- Who at your firm has access to my data?
- Are our communications end-to-end encrypted?
- What types of network security have you implemented?
- How do you back up client data?

SECURELY SENDING DOCUMENTS
The most secure way of transferring documents is physically, either handing them to your tax preparer in person or sending them through the mail. However, if you must transfer them electronically, be sure to do it as securely as possible:

- **Encrypt your files before sending them via email.** Encryption protects the content from being read by entities other than the intended recipients. Encryption features are available on most major email platforms.
- **Use a secure portal to upload documents.** Portals encrypt documents during transfer and storage and limit access to only approved individuals.

TIP: BACK IT UP
Protect your valuable documents by making an electronic copy and storing it safely. If you have a copy of your data and your device falls victim to ransomware, you will be able to restore the data from a backup.

**Use the 3-2-1 rule as a guide to backing up your data:**

- Keep at least three (3) copies of your data:
- Store two (2) backup copies on different storage media,
- With one (1) of them located offsite.
RESOURCES FOR TAX PROFESSIONALS

**Protect Your Clients; Protect Yourself**
Every tax professional is a potential target for highly sophisticated, well-funded and technologically adept cybercriminals around the world.

**Working Virtually: Protect tax data at home and at work with the "Security Six"**
Check out these basic "Security Six" protections that everyone, especially tax professionals handling sensitive data, should use.

The National Cybersecurity Alliance (NCA) builds strong public/private partnerships to create and implement broad-reaching education and awareness efforts to empower users at home, work and school with the information they need to keep themselves, their organizations, their systems and their sensitive information safe and secure online and encourage a culture of cybersecurity.
